## EDUCATION

**University of Illinois at Urbana-Champaign** | *Bachelor of Science in Computer Engineering* **May 2025**  
*Minor in Game Studies & Design* **GPA: 3.64/4.00**

Relevant Coursework: Data Structures & Algorithms, Software Engineering I, Operating Systems, Artificial Intelligence, Applied Machine Learning, Database Systems

## SKILLS

Languages: C, C++, Python, HTML, CSS, JavaScript, TypeScript, C#, SQL

Cloud & Systems: Google Cloud, AWS, Linux CI/CD

Frameworks & Tools: React, Pandas, Git, GitHub, Perforce, Unreal Engine 5, Unity, CI/CD

## WORK EXPERIENCE

**Digital Scorpion Interactive** – *Software Engineer* Remote - Contract | Aug 2025 – Present

- Architected core systems in **C++** for a shipped product, developing scalable UI architecture, persistence logic, and event-driven feedback systems while collaborating across teams to ensure production readiness
- Drove the studio's migration from **Perforce to GitHub**, reducing integration conflicts by **~30%** and improving development workflow efficiency

**Brunswick Corporation** - *Computer Graphics Developer Intern* → *Contract* Champaign, IL | Jan 2025 – Dec 2025

- Engineered an interactive boating simulator in **UE5 (C++)**, leveraging **Blender** for environment assets and integrating a **Python** WebSocket-driven HMI and UI/UX used **1,000+ daily users** at CES 2026
- Facilitated cross-team technical discussions to drive project direction, coordinated feature delivery through **Agile** workflows in **Asana**, aligning engineering efforts with product and business goals

**The stu/dio at Illinois** (*Work-for-hire studio through UIUC*) - *Programmer* Champaign, IL | Sep 2024 – Oct 2025

- Implemented a **VR** excavation simulator in **Unreal Engine (C++)**, developing custom **UI/UX** widgets and interaction systems to reduce cognitive load and improve accessibility for users on Meta Quest
- Translated playtest feedback from **20+** students and instructors into product improvements, driving a **40%** reduction in repeat usability issues while coordinating workflows through **Perforce**

## PROJECTS

**Operating System** – *Programmer [C, x86, Linux]* Champaign, IL | Aug 2023 – Dec 2023

- Designed core operating system components in **C**, including kernel-level process management, system calls, and interrupt handling on **x86** architecture
- Diagnosed kernel panics and memory faults using **GDB**, tracing failures across scheduler and file system interfaces to resolve critical failures and restore system stability

**MixSpace** – *Programmer [Python, TypeScript, HTML, CSS, JavaScript]* Champaign, IL | July 2025

- Deployed a real-time music curation platform integrating Spotify's **API**, **LLM** pipelines, and user data to dynamically generate playlists during live interaction
- Implemented event-driven data flows to support concurrent user requests, delivering a fully functional product in under **13 hours**

**StopQuest** – *Programmer [Python, MySQL, React, Pandas, Google Cloud]* Champaign, IL | July 2024– Aug 2024

- Engineered a **React**-based trip planner with **API** integration and state management hosted on **Google Cloud**, optimizing client-server data flow and improving scheduling performance
- Developed a **Python** backend with **Pandas** to process **1,000+ route options** using **Dijkstra's** pathfinding to fit activities within deadlines while leveraging **MySQL** for fast data storage and queries
