EDUCATION

University of Illinois at Urbana-Champaign

Bachelor of Science in Computer Engineering

Minor in Game Studies and Design

- Dean's List Fall 2022/2024

May 2025

GPA: 3.64/4.00

EXPERIENCE

Brunswick Corporation

Computer Graphics Developer Intern

Champaign, IL

January 2025 – July 2025

- Engineered a dynamic boating simulator in Unreal Engine 5 with C++, integrating environment tools and real-time HMI updates via WebSocket, ensuring accurate location-based feedback in a fast-paced dev environment
- Maintained a cross-functional QA pipeline—from usability testing and bug tracking to system validation ensuring end-to-end quality assurance for CES2026 showcase demos across various hardware setups
- Partnered with artists, engineers, and UX teams to iterate on functionality, resolve visual/interaction bugs, and maintain performance through version control (Perforce) and rapid testing cycles

Iron Galaxy Studios

Software Engineer Intern

Chicago, IL

May 2023 – August 2023

- Implemented core gameplay mechanics for a 3D action roguelike using Unreal Engine and C++, collaborating closely with designers and engineers to balance combat logic, resolve edge-case bugs, and maintain responsive controls.
- Developed game systems in EASy68K assembly language to create a personalized soccer game, showcasing low-level programming capabilities and optimizing for performance under hardware constraints.
- Participated in internal QA and iteration loops, debugging gameplay features, tuning interaction timing, and proposing enhancements that improved user flow and player feedback across multiple development sprints

PROJECTS

MixSpace

Programmer

Champaign, IL

July 2025

- Developed crowd-powered music system during a 13-hour hackathon with a 6-person team, curating real-time playlists for public spaces using Spotify's RESTful API and host prompts
- Leveraged Python and TypeScript to integrate Spotify's API and LLMs to fetch a user's top tracks, interpreting host-define prompts, and filtering songs for a dynamic shared queue

StopQuest

Programmer

Champaign, IL

September 2024–December 2024

- Designed a React-based trip planner to generate personalized itineraries before flights, focusing on efficient scheduling and user preferences
- Integrated a Python Flask backend with pathfinding logic(Dijkstra's) and MySQL integration to optimize routes and persist user data across sessions

SKILLS

Computer Skills: C, C++, C#, Python, MySQL, TypeScript, Visual Studio
